MafDb.gnomADex.r2.1.GRCh38-package

Annotation package for minor allele frequency data from exomes of the Genome Aggregation Database

## **Description**

This annotation package stores minor allele frequency (MAF) data derived from the exome variant set release 2.1 of the Genome Aggregation Database (gnomAD). The data are exposed to the user in the form of a GScores object, named after the package and loaded into main memory only as different chromosomes and populations are being queried. The class definition and methods to access GScores objects are found in the GenomicScores software package. To minimize disk space and memory requirements, MAF values larger or equal than 0.1 are stored using two significant digits, while MAF values smaller than 0.1 are stored using one significant digit.

Please consult the gnomAD FAQ page at http://gnomad.broadinstitute.org/faq before you use these data for your own research.

#### **Format**

MafDb.gnomADex.r2.1.GRCh38 GScores object containing MAF values from gnomAD exomes downloaded on April 2

#### Author(s)

R. Castelo

#### **Source**
