Package 'seqCNA.annot'

April 13, 2022

Type Package

Title Annotation for the copy number analysis of deep sequencing
cancer data with seqCNA

Version 1.30.0

Date 2013-03-27

Author David Mosen-Ansorena

Maintainer David Mosen-Ansorena <dmosen.gn@cicbiogune.es>

Import

Depends R (>= 2.10)

Description
Provides annotation on GC content, mappability and genomic features for various genomes

License GPL-3

git_branch RELEASE_3_14

git_last_commit e3f0b37

git_last_commit_date 2021-10-26

Date/Publication 2022-04-13

R topics documented:

| seqCNA.annot-package | *Annotation for the copy number analysis of deep sequencing cancer data with seqCNA* |

Description

Provides annotation on GC content, mappability and genomic features for various genomes

Details

Package:	seqCNA.annot
Type:	Package
Version:	0.99.0
Date:	2013-03-27
License:	GPL-3

Author(s)

Maintainer: David Mosen-Ansorena <dmosen.gn@cicbiogune.es>

| hg18 | *A table with GC content, mappability and presence of common CNVs for the hg18 human genome build.* |

Description

GC content can be used for read count correction, while mappability and CNV information can be used for window filtering.

Usage

```
data(hg18)
```

Format

A data frame with 2881044 observations on the following 3 variables.

GC A numeric vector with the proportion of G and C bases per 1000bp window over the total of non-N bases.

Mapp A numeric vector with the mean mappability of 35-mers within each 1000bp window.

CNV A numeric vector with the proportion of each window affected by the presence of a common CNV (frequency > 0.01).

References

Integrating common and rare genetic variation in diverse human populations. Altshuler DM, Gibbs RA, Brooks LD, McEwen JE. Nature. 2010 Sep 2; 467:52-8

Examples

```
data(hg18)
```

---

hg18_len	*A table with information on chromosome lengths for the hg18 human genome build.*

Description

The table is used to create genomic windows for the whole chromosome lengths.

Usage

```
data(hg18_len)
```

Format

A data frame with 24 observations on the following 2 variables.

chr A factor with levels 1 10 11 12 13 14 15 16 17 18 19 2 20 21 22 3 4 5 6 7 8 9 X Y.

length A numeric vector.

Examples

```
data(hg18_len)
```

---

hg19	*A table with GC content, mappability and presence of common CNVs for the hg19 human genome build.*

Description

GC content can be used for read count correction, while mappability and CNV information can be used for window filtering.

Usage

```
data(hg19)
```

Format

A data frame with 2881044 observations on the following 3 variables.

GC A numeric vector with the proportion of G and C bases per 1000bp window over the total of non-N bases.

Mapp A numeric vector with the mean mappability of 35-mers within each 1000bp window.

CNV A numeric vector with the proportion of each window affected by the presence of a common CNV (frequency > 0.01).

Examples

```
data(hg19)
```

---

hg19_len	*A table with information on chromosome lengths for the hg19 human genome build.*

Description

The table is used to create genomic windows for the whole chromosome lengths.

Usage

```
data(hg19_len)
```

Format

A data frame with 24 observations on the following 2 variables.

chr A factor with levels 1 10 11 12 13 14 15 16 17 18 19 2 20 21 22 3 4 5 6 7 8 9 X Y.

length A numeric vector.

Examples

```
data(hg19_len)
```

supported.builds	*Names of the genome builds for which the package contains annotation.*

Description

A vector with the names of the genome builds with annotation in the package.

Usage

```
supported.builds()
```

Value

A vector with the names of the genome builds with annotation in the package.

Author(s)

David Mosen-Ansorena

Examples

```
supported.builds()
```
