| fhesc   | Data from a simple experiment on Human stem cells.   |
| Description                                   |  |
|   | were assayed using Affymetrix 133plus 2 arrays. There were six arrays, three eplicates for undifferentiated cells, the other three were biological replicates for s. |
| Usage   |  |
| data(fhesc)                                   |  |
| Format  |  |

The data are in the form of an ExpressionSet instance.

2 fhesc

### **Details**

Human Embryonic Stem Cells, H1 Line were cultured under feeder-free conditions. Undifferentiated samples were taken from this pool. The differentiated samples were obtained by maintaining the cells in culture for 10 - 14 days in the absence of basic fibroblast growth factor and conditioned medium.

#### **Source**

The data were obtained from Dr. M. Tewari.

### References

These data were used to prepare the book chapter, R and Bioconductor packages in bioinformatics: towards systems biology, by Nolwenn LeMeur, Michael Lawrence, Merav Bar, Muneesh Tewari and Robert Gentleman

### **Examples**
