

Package ‘QDNaseq.hg19’

May 16, 2024

Type Package

Title QDNaseq bin annotation for hg19

Version 1.34.0

Date 2015-09-30

Author Daoud Sie [aut, cre]

Maintainer Daoud Sie <d.sie@vumc.nl>

Description This package provides QDNaseq bin annotations for the human genome build hg19.

Depends R (>= 3.2.1), QDNaseq

biocViews ExperimentData, OrganismData, Homo_sapiens_Data

QDNaseq.hg19-package *Package QDNaseq.hg19*

Description

This package provides QDNaseq binannotations for the mouse genome build hg19 for bin sizes 1, 5, 10, 15, 30, 50, 100, 500 and 1000 kbp (kilobasepair).

The datasets are named as follows:

```
hg19.1kbp.SR50
hg19.5kbp.SR50
hg19.10kbp.SR50
hg19.15kbp.SR50
hg19.30kbp.SR50
hg19.50kbp.SR50
hg19.100kbp.SR50
hg19.500kbp.SR50
hg19.1000kbp.SR50
```

License

This package is licensed under GPL.

Author(s)

Daoud Sie

Examples

```
data("hg19.30kbp.SR50")
assign("bins", get("hg19.30kbp.SR50"))
## Not run: readCounts <- binReadCounts(bins=bins, path="./bam")

# or

bins <- getBinAnnotations(binSize=30, genome="hg19")
## Not run: readCounts <- binReadCounts(bins=bins, path="./bam")
```

hg19.1000kbp.SR50 *Hg19 1000kbp bin annotations*

Description

Bin annotations are calculated for non overlapping 1000kbp bins generated as described in Scheinin et al. (see references). The annotated data frame contains:

- chromosome: Chromosome name,
- start: Base pair start position,
- end: Base pair end position,
- bases: Percentage of non-N nucleotides (of full bin size),
- gc: Percentage of C and G nucleotides (of non-N nucleotides),
- mappability: Average mappability of 50mers with a maximum of 2 mismatches as described in by Derrien et al. (see references),
- blacklist: Percent overlap with ENCODE blacklisted regions (see references),
- residual: Median loess residual calculated from 1000 Genomes (see references),
- use: Whether the bin should be used in subsequent analysis steps,

Value

Returns an [AnnotatedDataFrame](#) object.

```

hg19.10kbp.SR50

Hg19 10kbp bin annotations

Description

Bin annotations are calculated for non overlapping 10kbp bins generated as described in Scheinin et al. (see references). The annotated data frame contains:

- chromosome: Chromosome name,
- start: Base pair start position,
- end: Base pair end position,
- bases: Percentage of non-N nucleotides (of full bin size),
- gc: Percentage of C and G nucleotides (of non-N nucleotides),

## Not run: readCounts <- binReadCounts(bins=bins, path="./bam")
```

hg19.15kbp.SR50

Hg19 15kbp bin annotations

Description

Bin annotations are calculated for non overlapping 15kbp bins generated as described in Scheinin et al. (see references). The annotated data frame contains:

- chromosome: Chromosome name,
- start: Base pair start position,
- end: Base pair end position,
- bases: Percentage of non-N nucleotides (of full bin size),
- gc: Percentage of C and G nucleotides (of non-N nucleotides),

```

hg19.1kbp.SR50

Hg19 1kbp bin annotations

Description

Bin annotations are calculated for non overlapping 1kbp bins generated as described in Scheinin et al. (see references). The annotated data frame contains:

- chromosome: Chromosome name,
- start: Base pair start position,
- end: Base pair end position,
- bases: Percentage of non-N nucleotides (of full bin size),

```

hg19.30kbp.SR50

Hg19 30kbp bin annotations

Description

Bin annotations are calculated for non overlapping 30kbp bins generated as described in Scheinin et al. (see references). The annotated data frame contains:

- chromosome: Chromosome name,
- start: Base pair start position,
- end: Base pair end position,
- bases: Percentage of non-N nucleotides (of full bin size),
- gc: Percentage of C and G nucleotides (of non-N nucleotides),
